Career Objective

Results-driven software developer and data science student with a strong foundation in full-stack development and over two years of professional experience building responsive web and mobile applications using React.js and React Native. Proven track record of accelerating project delivery by 3x, optimizing application performance, and delivering pixel-perfect UI/UX designs. Skilled in RESTful API integration, SEO optimization, and cross-functional team collaboration. Known for completing tasks on time, solving bugs efficiently, and contributing to business growth through innovative, scalable solutions. Currently seeking a challenging software development opportunity to apply my technical expertise and passion for building impactful digital products.

Technical Knowledge

- **Frontend:** React.js, React Native, JavaScript, TypeScript, Redux
- **Backend:** REST API Integration, SQL, Python
- **UI/UX Design:** Figma, Photoshop, Adobe Suite
- **Web Tools:** HTML, CSS, Tailwind, Bootstrap, WordPress
- **Version Control:** Git, GitHub
- **Other Tools:** Jira, SEO, Google Search Console, Microsoft 365

Education

Master of Data Science Charles Darwin University, Sydney, Australia	Feb 2024 – Present
---	---------------------------

Bachelor of Computer Science University of Wolverhampton, England	Nov 2018 – Jun 2021
---	----------------------------

Employment History

Customer Service, Digital Marketing & SEO Marco Polo Motor Inn, Sydney, Australia	Feb 2024 – Present
---	---------------------------

- Welcoming guests and responding to phone and email inquiries
- Coordinating with housekeeping and maintenance teams
- Systematically maintaining and filing reports
- Managing social media platforms (Facebook, Instagram) and Google Search Console
- Designing promotional banners and modifying WordPress pages for digital marketing
- Using tools such as Canva, Adobe Suite, and Microsoft Office for content creation

Mid Software Engineer – React & React Native XCenter Technology, Nepal	Jan 2023 – Feb 2024 Started coding career in Dec 2020
--	---

- Developed cross-platform mobile applications using React Native and React.js, ensuring seamless functionality across iOS, Android, and web platforms.
- Integrated RESTful APIs to enable efficient and secure backend communication.
- Designed and implemented reusable UI components and effectively managed application state using tools like Redux or Context API.
- Ensured responsive design and consistent user experience across various screen sizes and devices.
- Created Higher-Order Components (HOCs) to promote code modularity and reusability.
- Optimized app performance by implementing debouncing techniques to reduce unnecessary API calls during search operations.
- Implemented secure routing for public and protected routes to manage user access and session control.

- Actively participated in scrum meetings, sprint planning, and retrospectives, contributing to team discussions and iterative development.
- Collaborated with teammates using GitHub for version control, conducting code reviews, and assisting peers with debugging and issue resolution.
- Worked in **Agile teams** using **Jira** and followed **Scrum methodologies** for sprint planning and task tracking.

Volunteer Work

Volunteer	Jan 2025 – Present
Tamang Society is a not-for-profit organization dedicated to preserving Tamang cultural heritage and supporting the Nepalese community in Australia. I independently designed and developed their official website using WordPress, focusing on responsive design, clear user navigation, and modern UI practices. I optimized page speed, fixed backend and frontend errors, implemented strong SEO strategies, and added clear calls-to-action (CTAs) to drive engagement. As a result, website traffic and community membership increased by approximately 1.5×, with improved visibility, faster load times, and better user interaction across devices.	

Academic Projects

Movie Recommend System

University of Charles Darwin university, Australia

Objective:	To design and develop a personalized, web-based movie recommender system using hybrid techniques (SVD and content-based filtering) to help users discover relevant movies based on their preferences and behavior.
Tools:	Python, Streamlit, Pandas, Scikit-learn, TMDB API, JSON, Git
Duties:	Independently developed a secure user-authenticated platform with session management using Streamlit. Implemented hybrid recommendation logic by integrating collaborative filtering (SVD-based predicted ratings) with content similarity. Enabled dynamic movie search, poster fetching via TMDB API, and role-based login system with password encryption and user history tracking.
Outcome:	Successfully deployed an interactive recommendation interface that generated tailored movie suggestions and simulated real-time user experience through intelligent filtering and prediction.
Result:	Delivered a high-quality prototype with a professional presentation and comprehensive technical report. Received a Distinction for the project.
